

Models:

RT-MB-006 – Breaking Value of Cationic Emulsions Test Set

Accessories:

RT-MU-001/OS-10 – Overhead Stirrer with adjustable speed completes with support base and blade stirrer

RT-MB-006/C – Can made of stainless steel, 500 ml

Standards:

EN 13075-1

Description:

RT-MB-006 test set is used to determine the breaking value of cationic emulsions via a dimensionless number corresponding to the amount of reference filler needed to coagulate 100 g of bitumen emulsion.

The test set consists:

- Filler feeder with adjustable aperture and built-in vibrator
- Enamel dish – 2 pcs
- Spatula made of stainless steel
- Support base and clamp.

RT-MB-006 test set correspond to the basic “Equipment for manual procedure” prescribed by the EN 13075-1 standard.

To perform the test in the “Semi-automatic procedure”, the set has to be completed by an overhead stirrer (see accessories – RT-MU-001/OS-10).

Weight (approx.) – 4 kg
